Precautions

- **This tool is specially designed for plunging and NOT recommended for traversing**

- Coolant is recommended
- Adjust ap to suit machine rigidity and overhang length
- Use chuck and machine with the highest rigidity possible
- Pecking is recommended when Drilling Depth is 2D or over
- Cutting condition modifications may be needed when cutting a slant surface, depending on the slant angle (Right Figure)
When workpiece slant is 30° or less, reduce the feed rate by 50%
When workpiece slant is 30° or more, reduce the revolution by 70% and the feed rate by 30%

2ZDK-HP-OH

- Internal coolant is recommended
- If there is insufficient chip evacuation at the specified drill depth, it is recommended to peck or change cutting conditions
- Pre-drilling is recommended if cutting is unstable
- Pre-drilling and pecking are recommended for stainless steel machining
- Pecking is recommended when drilling depth is 2D or over
